

AeroSpect Inc.

Aerial Reality Capture, GIS Mapping & Site Intelligence for Mission Critical Construction

Capability statement prepared for HITT Contracting

COMPANY SNAPSHOT

AeroSpect Inc. provides professional drone-based aerial data capture, photogrammetry, GIS mapping, thermal imaging, and construction progress documentation.

Led by a former commercial general contractor and former government contractor for security installations on military bases, with more than 3,000 licensed drone flight hours across construction, energy, agriculture, and infrastructure environments.

AeroSpect understands jobsite sequencing, access control, site logistics, owner documentation, and repeatable field intelligence for PMs, VDC teams, owner reps, and trade partners.

CORE SERVICES

- Recurring aerial construction progress documentation
- High-resolution existing-condition photo records
- Orthomosaic mapping and photogrammetry deliverables
- GIS-ready site layers, annotations, and map packages
- Site logistics, laydown, access road, drainage, and utility corridor documentation
- Thermal imaging support for roofs, electrical infrastructure, equipment, and site heat concerns
- Perimeter and security infrastructure documentation
- Stakeholder-ready reporting for PMs, owner reps, consultants, and field teams

BEST-FIT PROJECT TYPES

- Mission critical and data center construction
- Industrial and energy sites
- Large-site civil and infrastructure work
- Security, perimeter, and access-control documentation
- Construction technology and VDC support
- Recurring regional site documentation

MISSION CRITICAL / DATA CENTER APPLICATIONS

- Pre-construction site baseline documentation
- Weekly or monthly progress flights for large campus-style builds
- Earthwork, grading, trenching, and utility corridor documentation
- Visual status records for subcontractor coordination and owner reporting
- GIS-based tracking of site access, circulation, perimeter controls, and phased work areas
- Thermal and multispectral support where specialty sensing adds value
- Rapid independent documentation after weather, site events, disputes, or schedule impacts

DIFFERENTIATORS

Former commercial GC perspective

Military-base security installation background

3,000+ licensed drone flight hours

GIS analyst capability

Thermal and multispectral specialization

Established Northern California operator

COMPLIANCE & DELIVERABLE NOTE

AeroSpect provides aerial data capture, construction documentation, photogrammetry, GIS mapping, and site intelligence services. Stamped boundary, topographic, or other regulated survey deliverables can be coordinated with a licensed survey professional where required.
